

FromUri in ASP.NET CORE 2.0

- ▲ 25 ▼ This question is because in my MVC project with **ASP.NET CORE 2.0**, I can not add the `[FromUri]` attribute to my drivers.
- I tried using libraries like `System.Web.Http`, but I did not recognize them. Then install these from Nuget `Microsoft.AspNet.WebApi.Core` "and" `System.AppDomain.NetCoreApp`, which resulted in being able to use `System.Web.Http` but due to ambiguity problems I was not allowed to use it, but if I found that `[FromUri]` existed.
- ★ The main question is whether in ASP.NET core 2.0 MVC or WebApi exists `[FromUri]` ?
- 1 if it exists, how to use it?
- `asp.net-core` `asp.net-core-2.0`

- ▲ 72 ▼ I think you might be looking for `[FromQuery]` : <https://docs.microsoft.com/en-us/aspnet/core/mvc/models/model-binding#customize-model-binding-behavior-with-attributes>
- ✓ `[FromUri]` is used in Asp.Net WebApi 2, not asp.net core

TLDR : You can use `[FromQuery]` and `[FromRoute]` in place of `[FromUri]`

12

As Mike_G stated in his [answer](#) you can use `[FromQuery]` attribute in place of `[FromUri]` . But you might also need to use `[FromRoute]` in certain cases as pointed by [Muhammad Umar](#) in comments.

[FromRoute](#)

This attribute is used when the parameter is passed as the part of the URL string.

Ex: `api/countries/1`

[FromQuery](#)

As the name implies, `FromQuery` parameters has to be passed as query strings.

Ex: `api/countries?id=1`
