

how to rename a migration in entity framework core

▲ How could I change the name of an old migration (rename it)? It conflicts with the name of my custom identity user.

2

Would changing the identity user be easier? I have no idea how to rename that either, every tutorial out there just create a new db for the sake of simplicity (any information about that is appreciated too).

Is it as simple as renaming it in:

- it's migration .cs file
- the db migration table
- the snapshot

Is that it? Any idea if this could screw things up?

If it's just the class name conflicting, only renaming the class should be sufficient.

1

If you *really* want to rename the whole migration, your steps look correct. Make sure you check the *.Designer.cs file to rename the string literal containing the name.
