

# ValidateInput(bool) in ASP.NET Core

▲ In ASP.NET Framework when I want to pass HTML code from Javascript to Controller just wrote [ValidateInput(false)] before Method and no problem for me:

3

Just like my question [here](#)

I need to know same but ASP.NET Core.

Error CS0246 The type or namespace name 'ValidateInput' could not be found (are you missing a using directive or an assembly reference?)

Thanks

c#

asp.net-core

1 According to [this thread](#), there is no request validation in core at all, you are supposed to do it yourself instead – [Andrei](#) Nov 11 '16 at 17:03

## 1 Answer

In asp.net core you may not need to add this attribute, because, by default, the validation is not so strict as in ASP.NET MVC 4 or 5.

3

For example, passing HTML code via POST to a controller does throw an exception in older versions of ASP.NET(eg MVC 5)

A potentially dangerous Request Form value was detected from the client
