.NET Core Is also a free and open source software framework for developing Console and Web Application for all platforms.

The first .NET version 1.0 was released in June 2016.

CHECK VERSION

With .NET Core we have 3 ways to check which version Is running on the system, the most basic way will be to run the cmdlet below which will show the running version.

Dotnet --version

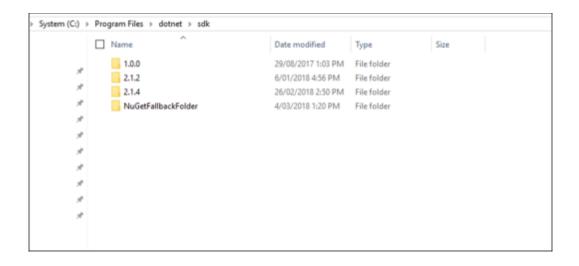

```
Administrator: Windows PowerShell

PS C:\app01> dotnet --version
2.1.4

PS C:\app01>
```

To view all .NET Core versions Installed on the system we can navigate to the Installation folder on the path below.

C:\Program Files\dotnet\sdk

And last, To check SDK version and runtime version the command below will provide all the necessary details Including Installation path, OS name, version and platform.

```
dotnet --info
```
