'ILoggerFactory' does not contain a definition for 'AddLog4Net' and no accessible extension method

JUNE 13, 2019JUNE 13, 2019 ~ WARREN LAFRANCE
To fix this issue you need to run the npm command to install the MS Extension.

If you are getting this error:

'ILoggerFactory' does not contain a definition for 'AddLog4Net' and no accessible extension method 'AddLog4Net' accepting a first argument of type 'ILoggerFactory' could be found (are you missing a using directive or an assembly reference?)

You will need to add this extension to our project: [link (https://github.com/huorswords/Microsoft.Extensions.Logging.Log4Net.AspNetCore)]

Run this NUGET Command from the Package Manager Console in Visual Studio.

install-package Microsoft.Extensions.Logging.Log4Net.AspNetCore

POSTED IN .NET CORE, C# DEVELOPMENT, UNCATEGORIZED
   LOG4NET.   NODE PACKAGE MANAGER   NPM
